The background of the entire page is a soft-focus photograph of a kitchen area. In the foreground, a white bowl filled with a colorful salad of purple, green, and orange vegetables sits on a round, light-colored woven placemat. Behind it, an open brown cardboard box also contains salad. The background is filled with various green plants, including a large leafy plant on the left and a trailing vine on the right. The overall lighting is bright and natural, creating a fresh and eco-friendly atmosphere.

Eco or ecology is about relationships: how we relate to our environment and each other.

The I am eco™ range has been designed with the environment in mind at every stage – from sourcing materials and manufacturing to distribution and end-of-life disposal. I am eco™ signals our commitment to forming a healthy, balanced relationship with our environment and with our customers.

I am eco™ products are made from sustainable, natural raw materials and are biodegradable, compostable and recyclable – without compromising on function or quality. Every action we take has an impact on our environment. The I am eco™ range takes the guess work out of environmental responsibility. Make the switch to sustain your relationship with the environment. I am committed to the environment.

iam eco™

made from nature • biodegradable • compostable • made from recycled materials

**I AM ECO™
PRODUCTS ARE MADE
FROM NATURAL,
SUSTAINABLE
MATERIALS.**

Sugarcane, corn and trees are used to create our I am eco™ products. We source sustainable materials, research innovative renewable products and investigate new processing and packing options to reduce carbon emissions and our impact on the environment.

**SUGARCANE &
BAGASSE PULP**

The sugarcane plant is fast growing and a highly renewable resource. It reaches maturity in just nine months, growing to about three metres tall. Based on production volumes, it's one of the largest crops in the world – around 1.83 billion tonnes per year. For every 10 tonnes of sugarcane processed, three tonnes of a fibrous leftover product, called bagasse, remains, in quantities of about 610 million tonnes per year.

Put to good use as bagasse sugarcane pulp and transformed into packaging products, it is diverted away from landfill, making a big difference to the environment. A biodegradable and compostable material, Detpak uses moulded bagasse sugarcane pulp to make packaging items including eco plates, bowls and boxes, which are very sturdy and have great thermal properties.

**TREES – PAPER &
PAPERBOARD**

Paper is a natural fibre made from trees. It is renewable, recyclable, compostable and biodegradable. Not all papers are created equal when you consider their environmental credentials.

As part of our commitment to sustainable sourcing we only source paper and paper board from large reputable paper mills with evidence of sustainable and ethical forestry practices.

We take our role as an environmentally responsible manufacturer seriously. Only managed plantation timber is used in our facilities and we regularly audit our suppliers to make sure they meet our high sustainability standards.

WHY i am TMeco

PLA BIOPLASTIC

Polylactic acid (PLA) is a natural starch derived from plants like corn and sugarcane that is processed to create a clear plastic-like film or bioplastic. Unlike the traditional polyethylene (PE) or polyethylene terephthalate (PET) plastics, these innovative films and bioplastics are annually renewable, naturally biodegradable and compostable. They can be used to line and protect paper and board packaging as well as moulded into cutlery and container lids.

Crystallised polylactic acid (CPLA), a different variation of bioplastic, is used in products that need to cope with higher temperatures. This form of PLA can withstand temperatures up to 85°C without warping, deforming or breaking. This makes it perfect for cutlery, hot cup lids and soup container lids.

I AM GREEN

Not reliant on fossil fuels

Made from nature – the paperboard is from trees and the lining is from corn

Sustainably sourced

Biodegradable and compostable

Renewable

My lifetime carbon emissions when composted are 55% lower than a comparable size double wall hot cup that is PE lined.

{ MAKING THE SWITCH }

A typical busy city café, switching from regular plastic-lined double wall paper cups and plastic lids, to Brown I am eco™ Ripple-Wrap™ cups (lined with bioplastic) and CPLA Lids, could save 2.5 tonnes of CO₂ emissions¹. This is equivalent to:

 489,848 HOURS 
of a light bulb running²
(THAT'S 56 YEARS!)

2,549 L OF
UNLEADED PETROL³

35,922 km travelled
by car⁴ 

2.61 CARS OFF THE ROAD
FOR A YEAR⁵ 

13.5 BARRELS
OF OIL CONSUMED⁶

1. This scenario is based on a busy city cafe serving 300 12oz coffees per day for 25 days each month, which is equivalent to 90,000 cups and lids per annum.

2. Assumption: 12W light bulb. Source: NSW Electricity Emissions Factor - NGER Technical Guidelines 2014

3. Source: ULP energy content, emissions factors - NGER Technical Guidelines 2014.

4. Assumption: Toyota Corolla 1.8L 4cyl, ULP, Man 6 speed, Sedan, 5 seats, 2WD. Source: Fuel efficiency - Green Vehicle Guide.

5. Assumption: Toyota Corolla 1.8L 4cyl, ULP, Man 6 speed, Sedan, 5 seats, 2WD. Sources: (1) ULP energy content, emissions factors - NGER Technical Guidelines 2014, (2) Fuel efficiency - Green Vehicle Guide, (3) Average KM's driven - Australian Bureau of Statistics, 2012.

{ THE FACTS ABOUT PAPER BAGS }

WHY ARE PAPER BAGS A GOOD ENVIRONMENTAL CHOICE?

PAPER IS THE SOLUTION

Plastic bag bans or levies have been introduced in numerous countries worldwide over the past several years. From the United Kingdom to Australia and the Philippines, everyone is introducing laws to minimise the impact that plastic bags have on our natural environment.

If not disposed of properly plastic bags can pollute waterways, clog sewers and have even been found in oceans affecting the habitat of marine animals and contributing to plastic waste gyres such as the Great Pacific Garbage Patch.

we can all say “we are eco”

LIVING ECO

IN AUSTRALIA, WE REDUCED ENERGY USE (PER KILOGRAM OF PRODUCT) BY 18.3% OVER THREE YEARS. WATER USE (PER KILOGRAM OF PRODUCT) ALSO DECREASED BY 25.1% THROUGH DETPAK'S COMMITMENT TO THE AUSTRALIAN PACKAGING COVENANT.

RESPONSIBLE SOURCING OF MATERIALS

We only source raw materials from sustainable and ethical sources. We can say this with confidence as we regularly audit all of our suppliers, and in turn many of the world's largest food brands regularly audit our operations.

We keep the use of inks and adhesives to a minimum and we also prioritise the use of water-based and soy inks. These are more environmentally friendly than solvent based inks as they use less non-renewable resources.

REDUCE, REUSE, RECYCLE

Detpak was one of the first signatories to the Australian Packaging Covenant, a sustainable packaging initiative that encourages businesses to reduce the environmental impacts of consumer packaging. We promote sustainable packaging design, increased recycling rates and efforts to reduce packaging litter. As part of our membership we submit annual reports to demonstrate our progress against a rigorous set of environmental targets. In our last three submissions we have been recognised as high performers amongst all member companies.

I AM ECO™ ONLY USES RENEWABLE RESOURCES – THOSE THAT WE WILL NEVER RUN OUT OF, LIKE PLANTS.

REDUCING AND OFFSETTING OUR CARBON EMISSIONS

As a business it is important that we understand our total energy usage, so that we can take steps to minimise our carbon footprint and do our part to stop climate change. Every time we take a flight, drive a car or turn on a light, we burn fossil fuels and release greenhouse gas emissions into the air, causing climate change.

Detpak has been working closely with the Carbon Reduction Institute on a Low Carbon Programme. We audit energy use across our business, and work to find new ways to reduce our energy use and greenhouse gas emissions as well as putting practices in place to offset our current greenhouse gas emissions.

ETHICAL MANUFACTURING

Detpak takes pride in being a manufacturer, not simply an importer. We're proud of the products we make, but we're equally proud of the way we operate in our Australian and International manufacturing plants. We work to a strict Corporate Social Responsibility Policy, which covers fair wages and working conditions that are consistent with the needs and expectations of our global customers. In China alone we pass in excess of 30 independent audits each and every year from customers and independent bodies. You can find out more by reading our Group Code of Conduct policy at detpak.com.

STRINGENT FOOD SAFETY AND QUALITY CONSISTENCY PROGRAMS

We maintain the most highly recognised global standards for food safety and quality consistency, including ISO22000, ISO 9001 and BRC accreditation certifications. Our products are manufactured in a food packaging grade environment so our customers can be assured that they achieve the highest quality standards.

BUILDING RELATIONSHIPS

Detpak is privately owned by the Detmold family, who have been manufacturing packaging since 1948. We are a proud member of Family Business Australia, the peak body committed to providing support and guidance to the family business sector. Being a privately owned business, we value our customer relationships, community relationships and our relationship with the environment.

AUSTRALIAN ORGANICS RECYCLING ASSOCIATION (AORA)

We are members of the Australian Organics Recycling Association (AORA). AORA acts as an advocate for the wider organics resource recovery and beneficial reuse industries, representing their views in a constructive dialogue with policy makers.

ENVIRONMENTAL CHECKPOINT

common terms explained

SUSTAINABLE

We source from managed forests

The paper and board we use is sourced from responsibly managed forests and the mill has been audited for evidence of sustainable and ethical forestry practices.

The nitty gritty: Sustainable sourcing refers to the practice of purchasing raw materials from sources which are responsibly managed to ensure the ongoing feasibility of that resource. Plantation forests are a good example of a sustainable paper source. Detpak only uses paper and board from large reputable raw material suppliers, who we audit regularly for evidence of sustainability. The chain of custody certificates allow all of us to trace the fibre in the final package right back to its source in nature.

BIODEGRADABLE AND COMPOSTABLE

Breaks down in 90 days

Products that are biodegradable and compostable will break down into natural elements within 90 days when treated in a commercial facility, as defined by European standard EN13432.

The nitty gritty: Where products are correctly described as compostable, this refers to their suitability for treatment at a commercial composting facility where products are subject to optimum amounts of sunlight, temperature and moisture to break down. You can also place our compostable products in your home compost, but the time it takes to break down will depend on how well you tend your compost heap.

Compostable = biodegradable, but fast!

RECYCLABLE

Can be placed in a recycling bin

These materials can be readily recycled via kerbside recycling bins once food residue is removed from the product.

The nitty gritty: A product or material is recyclable if it can be collected and re-manufactured into a new product. Many recycling facilities will not accept packaging that has food residue on it.
